Declaration of REACH Compliance

The European Union (EU) has adopted regulation no.1907/2006, also known as the REACH (Registration, Evaluation and Authorization of Chemicals) regulation, which became effective on 1st June 2007.

REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) is a system of controlling chemicals in use in Europe.

Titan Enterprises Ltd. Obligations as a Supplier

This declaration is issued based on our current level of knowledge and covers all products. Titan Enterprises Ltd. does not supply any product containing any substance identified as an SVHC to our customers that require registration with REACH as per the candidate list below.

The latest list of SVHC can be found at: <https://echa.europa.eu/candidate-list-table>

To ensure compliance we have assessed our flow measurement products and determined that they are classified as 'articles' under the REACH definitions and are therefore exempt from registration. In addition to this Titan Enterprises Ltd. does not have any parts that we manufacture or purchase with a chemical content that requires Reach registration.

As a company concerned about our environment, we are active in limiting our use of chemicals. We work closely with a monitoring service to track our MSDS sheet, chemical usage and other materials to meet all regulations. In the future, if our monitoring indicates a change in REACH status for any product we supply to a customer(s), we will inform that customer(s) accordingly and register that chemical with Reach.

Titan Enterprises Ltd. Suppliers' Obligations

Titan Enterprises Ltd. expects all its suppliers to understand and comply with REACH. Titan Enterprises Ltd. suppliers that import or manufacture substances and preparations (mixtures of two or more chemical substances) into the EU must pre-register or register the substances.

Titan Enterprises Ltd. suppliers of finished products must assess whether the products contain chemicals classified as "substances of very high concern" (SVHC) in a concentration of more than 0.1% by weight. If this is the case, this information must be communicated to Titan Enterprises Ltd. If the total volume of the SVHC exceeds one ton per year this information must be communicated to the European Chemicals Agency. If we use a new material that contains SVHC listed materials > 0.1%, or if new information becomes available on materials we already use, we will practice our legal duty and inform our customers in an unsolicited manner.
